

HIGH DENSITY BOOM GREASE

NOW AVAILABLE

- > Part Number: 03329071
- > Usage: Boom Sliding Surfaces

Smooth boom operation on a telescopic crane is a fundamental requirement to all lifting duties. Owing to the construction of modern pinned booms with relatively thin steel sections and large wear pads, this has never been more important. An appropriate lubricant with special properties is required.

Manitowoc Crane Care is proud to offer this perfectly suited, high density lubricant that has exceptional performance, is long lasting, weather resistant and with tested reliability. There is simply no equivalent available.

Apply as required or routinely during preventive maintenance procedures. This specialist lubricant is available in 400 g cartridge for the hand-spray gun plus 10kg (P/No 01373458) and 25 kg (P/No 02314698) containers, ideally used with our boom lubrication kit (P/No 04158888, pump, spray lance, hand gun nozzle and associated hoses).
