

HIGH PERFORMANCE SUSPENSION OIL

NOW AVAILABLE

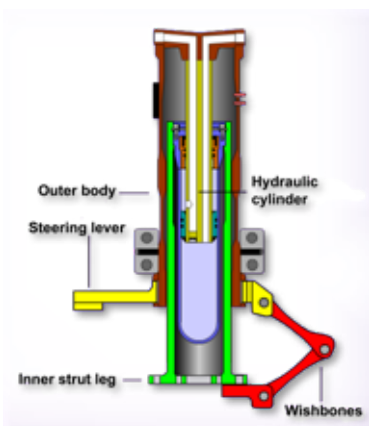

- > Part Number: 02310863
- > Usage: MegaTrak Suspension Strut

This unique lubricant, penetrates the tight tolerances of the moving parts inside the suspension cylinder, guaranteeing lubrication of all bearing surfaces. There are no equivalent or suitable alternative oils or greases for this application.

It is normal to have a small amount of usage of this lubricant, but top-up only when the sightglass level is low. Use the supplied hand pump tool to fill the lubricant in to the cylinder.

The MegaTrak Suspension strut comprises a hydraulic cylinder for the suspension function. The hydraulic cylinder rotates in the outer body of the strut to give the steering function.

The driving load from the wheels applied on the cylinder, together with the steering rotation force is supported by shell bearings between the moving parts. These highly loaded shell bearings require a special type of lubricant to ensure free movement and a long life cycle.
