

**ProTECHtor™ improves after-sales technician safety** during maintenance work on tower cranes.

With ProTECHtor™, it's **the technician himself** who has control over all the crane's movements, thus avoiding any untimely movements that could jeopardize his **safety**.

## The technician therefore has the power to :

- Prohibit all movement
- Remotely authorize movements at slow or full speed, depending on the limit set on the ProTECHtor™.
- Stop all movement thanks to an emergency stop that's always available.

## For which type of crane?

GMA CCS, GME CCS ...

A downgraded mode in which only the emergency stop/ crane lock function is available:

- for non CCS cranes
- when an anti-collision system is installed

## Customer benefits

ProTECHtor™ allows you to work on and maintain your machines with enhanced safety.

## Composition of the ProTECHtor™ :

- Cover for protecting and holding the remote control unit
- Remote control unit and connection cable
- Battery charger
- Receiver with removable antenna
- Indicator light
- Extension cable for connecting the receiver at different points on the crane

In addition to the complete ProTECHtor™, a pre-equipment package is also available. This consists of a wiring harness which connects the ProTECHtor™ to the crane cabinet. Part of the wiring harness remains permanently installed on the crane, facilitating the technician's work.
